SCC PLATFORM

How each process works

A visual guide to the steps of every record type, for the departments that will use the platform.

BASED ON REQUIREMENTS v2.8

Prepared for Rayan Alghamdi
SCC Supervisor | 17 October 2026

INSIDE

1 Statuses and roles
2 AI Camera observations
3 DashCam observations
4 Speed violations
5 SOS alerts
6 Weather monitoring
7 Admin modules
8 Operator Performance (Admin only)
9 Rules that apply everywhere

All names, counts and pictures are illustrative. Items still to be confirmed are listed in Section 12 of the requirements.

Statuses and roles

Three statuses

Open Registered and waiting for the next Operator step.

Under Process The step is done and the record waits for Admin review.

Closed Approved by Admin, or closed by the Operator for SOS alerts.

OPERATOR does

- Registers observations, violations and SOS alerts
- Completes the close-out or the Confirm Driver & Submit step
- Closes SOS alerts
- Records weather readings

ADMIN does

- Reviews close-outs: approves or returns with a reason
- Edits original details and deletes records
- Manages users, lists, contacts and device counts

RECORD TYPE	START	NEXT STEP FOR THE OPERATOR	ADMIN REVIEW	RESULT
AI Camera Observation	Register Open	Close-out: action, picture, Safety Officer	Yes	Approve: Closed. Return: Open
DashCam Observation	Register Open	Confirm Driver & Submit with ITQAN proof	Yes	Approve: Closed. Reject: Open
Speed Violation	Register Open	Confirm Driver & Submit with ITQAN proof	Yes	Approve: Closed. Reject: Open
SOS Alert	Register Open	Four closure fields	No	Operator closes it: Closed
Weather record	Record and save	No second step	No	No status

Open, Under Process and Closed are set by the system. The Operator never types a status.

AI Camera observations

From registration to closure in three steps.

1 Register the observation — OPERATOR

- Project, location, date and time
- Alert Summary, Alert Type, Category and Risk Level
- Detection method and the observation picture

→ Open

2 Submit the close-out — OPERATOR

- Close-out Action
- Close-out Picture
- Safety Officer (HSEO): name and badge number

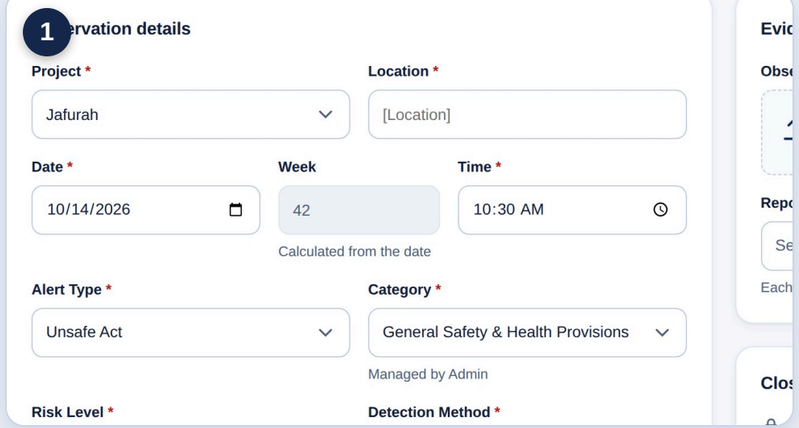

→ Under Process

3 Review the close-out — ADMIN

- Approve: the record is Closed
- Return with a reason: back to Open

RESULT: Closed

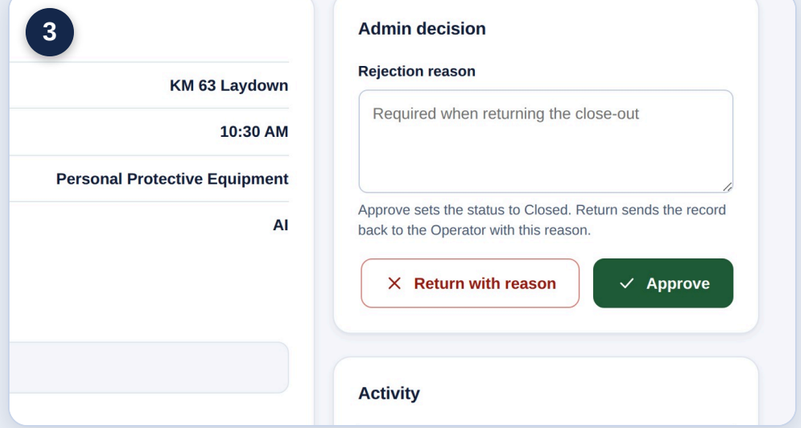

If Admin returns it: the record goes back to **Open** with the reason shown, the Operator corrects it and submits again, and the cycle repeats.

Register. Required fields carry a red asterisk and Register waits until they are complete.

Close-out. Action, picture and the Safety Officer name and badge number.

Admin review. Approve to close, or return with a reason.

Week is calculated from the date. Registered observations appear in the register with their status.

DashCam observations

Confirm Driver and the ITQAN upload are one step, done by the same person.

1 Register the violation — OPERATOR

- Vehicle Type and Model
- Asset number and driver details
- Location, date, time, violation type and risk level
- Violation picture and Reported By

→ Open

2 Verify the driver — OPERATOR

- Done with Logistics, outside the platform
- The record stays Open
- Driver details can still be edited

→ Open

3 Confirm Driver & Submit — OPERATOR

- Upload the violation in ITQAN
- Attach the ITQAN proof (image)
- Choose who uploaded
- Close-out Action fills itself

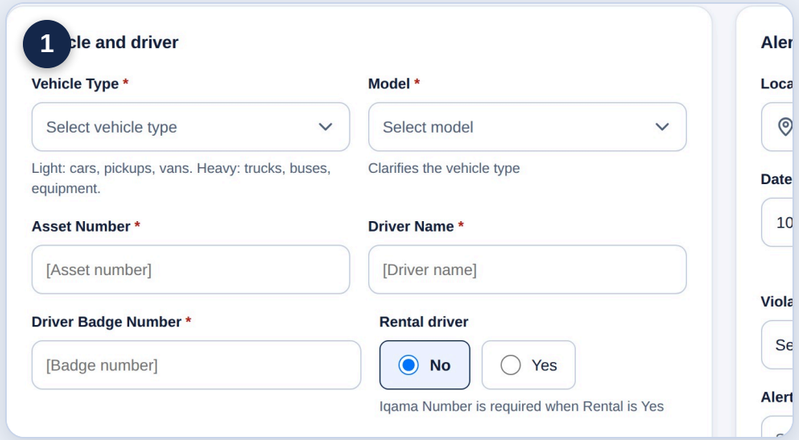

→ Under Process

4 Review — ADMIN

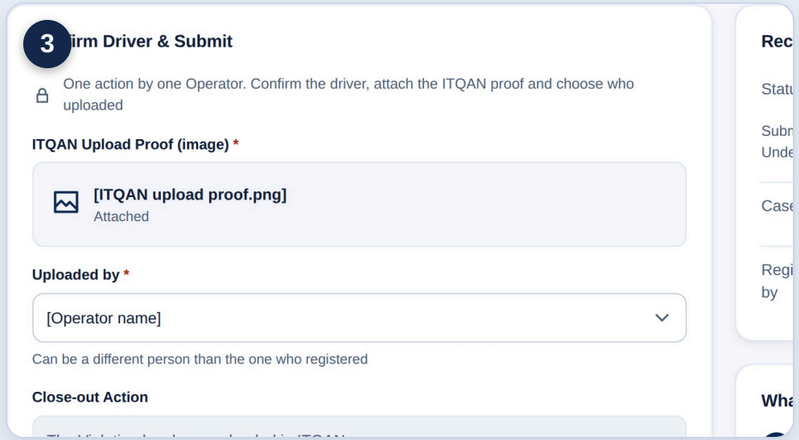

- Approve: the record is Closed
- Reject with a reason: back to Open

RESULT: Closed

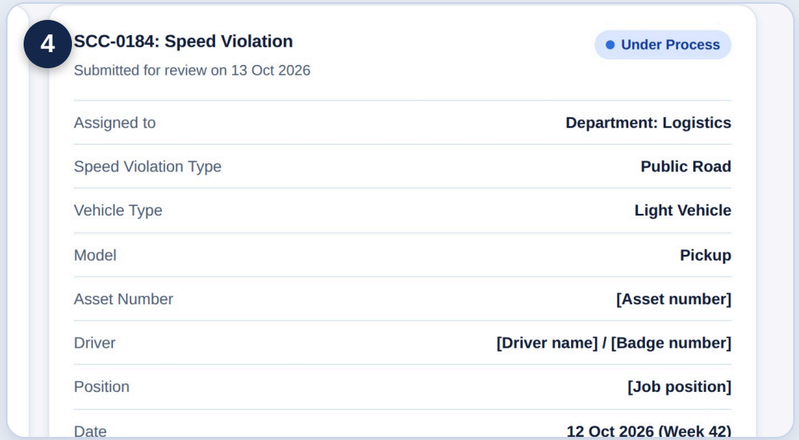

The step can be done by any Operator, not only the one who registered the violation. The system records who confirmed and uploaded, and when.

Register. Vehicle Type and Model clarify the vehicle.

Confirm Driver & Submit. ITQAN proof, Uploaded by, automatic Close-out Action.

Admin review. Admin sees who confirmed and uploaded.

A violation is assigned to a Project or to a Department.

Speed violations

Same flow as Dashcam, with the speed details.

1 Register the violation — OPERATOR

- Public Road or ROW, and Vehicle Type (Light or Heavy)
- Model, asset number and driver details
- Permitted speed and vehicle speed
- FMS evidence and Reported By

→ Open

2 Verify the driver — OPERATOR

- Done with Logistics, outside the platform
- The record stays Open
- Driver details can still be edited

→ Open

3 Confirm Driver & Submit — OPERATOR

- Upload the violation in ITQAN
- Attach the ITQAN proof (image)
- Choose who uploaded
- Close-out Action fills itself

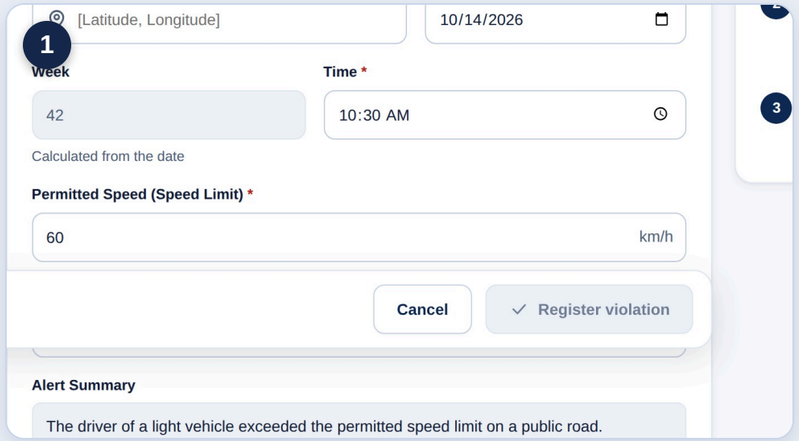

→ Under Process

4 Review — ADMIN

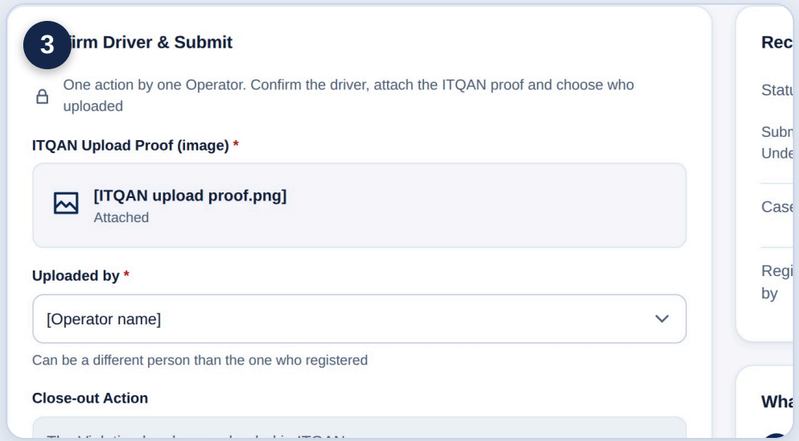

- Approve: the record is Closed
- Reject with a reason: back to Open

RESULT: Closed

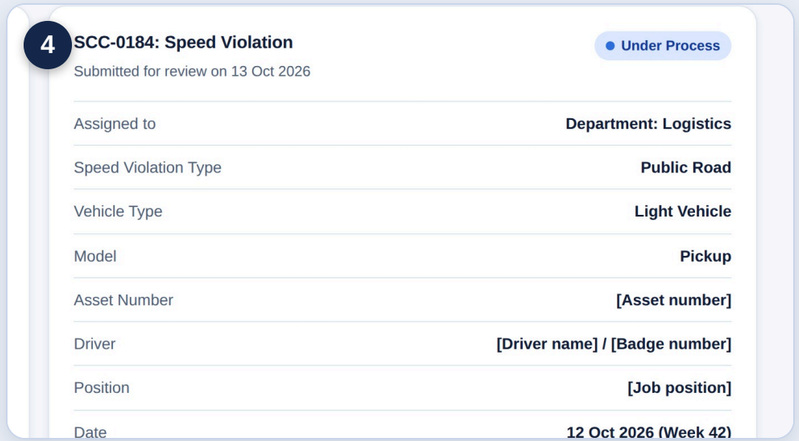

Alert Summary is automatic. It is built from the violation type, the vehicle type and the two speeds, so the Operator never writes it.

Register. Alert Summary is generated from the speeds.

Confirm Driver & Submit. Same step as Dashcam.

Admin review. Approve or reject with a reason.

A violation is assigned to a Project or to a Department.

SOS alerts

Two steps. No Under Process stage and no Admin approval.

1 Register the alert

OPERATOR

- Project and Worker Name & Badge Number
- Iqama number instead of the badge number if rental
- SOS created, seen, location and source

→ Open

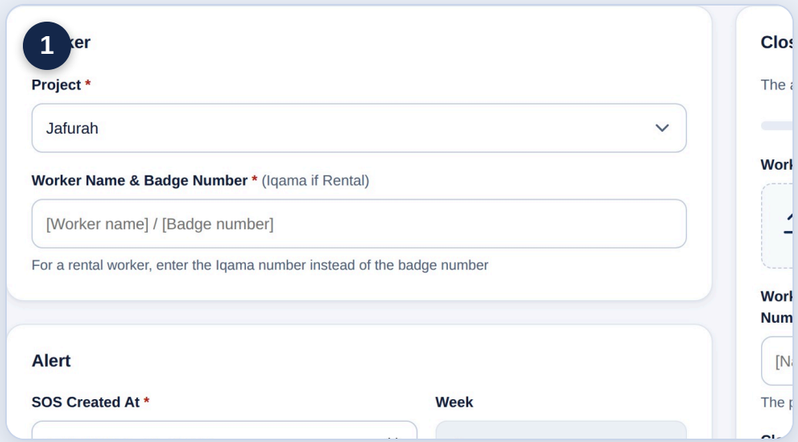

2 Close the alert

OPERATOR

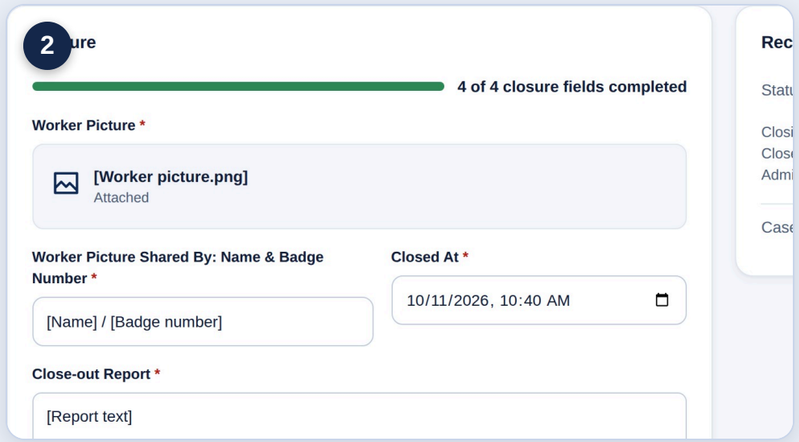

- Worker picture
- Worker picture shared by (name and badge)
- Closed At
- Close-out report

RESULT ● Closed

The alert cannot be closed until all four closure fields are completed.

Register. The closure fields are shown and locked.

Close. Four fields complete, then Close alert.

SOS alerts are closed by the Operator.

Weather monitoring

Recording and display only.

1 Open a weather record — OPERATOR

- Four tables are available on the screen
- Project, location and date are required in each table you fill

2 Enter the readings — OPERATOR

- Time appears once, at the start of each row
- Wind speed, temperature, humidity and CO2
- PM2.5, PM10 and Heat Index
- Remarks and corrective actions

3 Save — OPERATOR

- Recording only
- No statuses and no review
- Shown in the dashboard weather summary

1

e 1 of 4

One row for each hour from 7:00 AM to 2:00 PM. Time appears once, at the start of each row.

Location	Project	Date	Time	Wind Speed Monitoring	Tempera Monitor
				Highest Wind Speed Recorded (m/s)	Highes Tempera Recorded
			7:00 AM	1.2	12.2
			8:00 AM	5.8	11.3
			9:00 AM	6.1	14.4

Location, Project, Date and Time come first in every table.

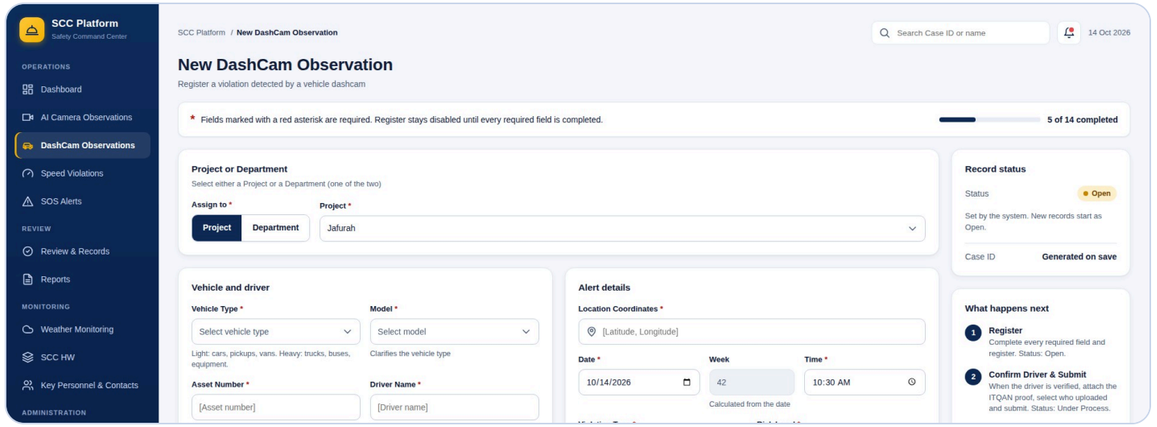

2

PM) ing	PM2.5 + PM10 Monitoring		Heat Index	Remarks / Corrective Actions
CO2 ed)	Highest PM2.5 Recorded	Highest PM10 Recorded		
	100.7	3.6	11.8	Foggy weather
	9.2	12.4	10.8	Foggy weather
	18	23.25	14.2	Normal weather

Readings, Heat Index and Remarks. Readings are optional.

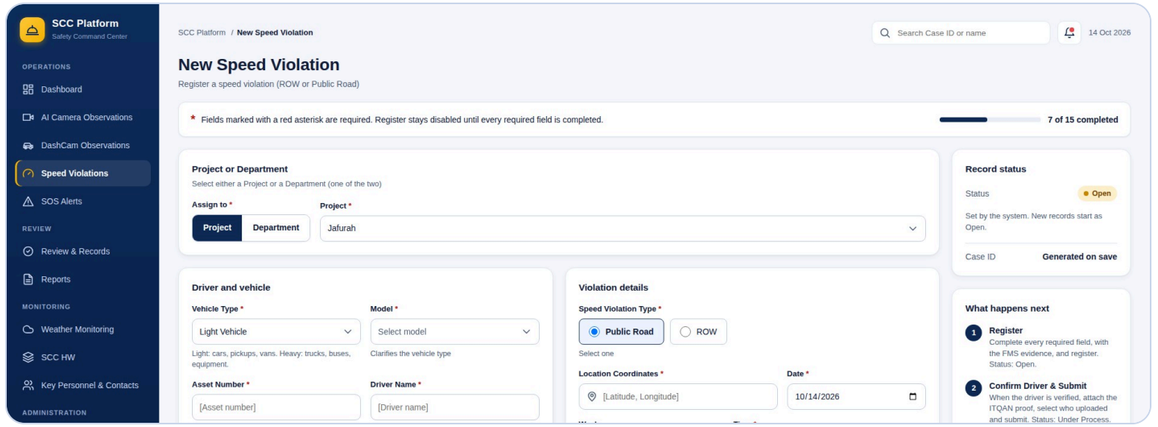

Weather records have no status workflow.

Admin modules

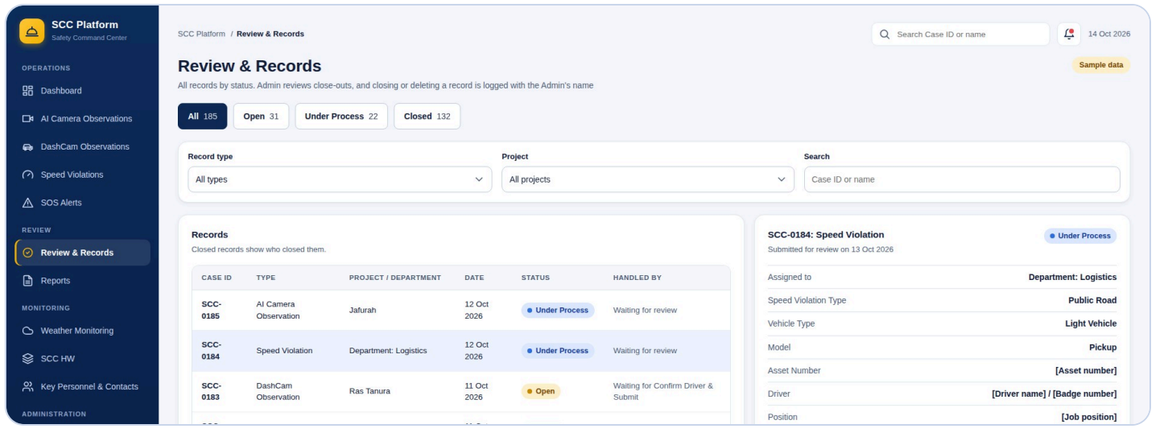

Key personnel and contacts

Contacts and emergency numbers for each project, updated by Admin.

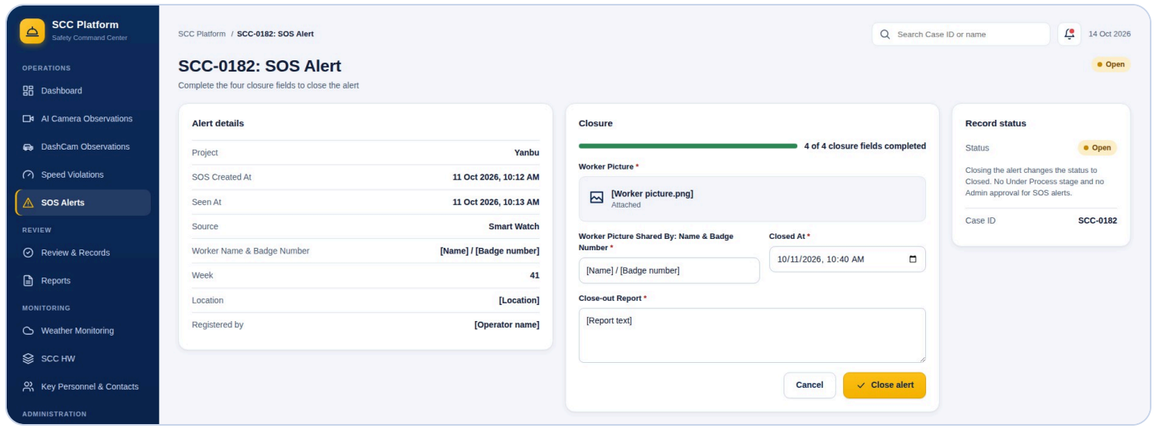

SCC HW

Device counts by type for each project and for each department, exported to Excel and PDF. Dhahran appears here only.

Reports

Weekly and monthly reports on records, with filters and export.

Administration

Users, roles and the dropdown lists. Deleting asks for confirmation and is kept in the audit log.

Operator Performance

Admin only. Rates each Operator on observations, violations and actions.

1 Open the workspace — ADMIN

- Only Admin can open Operator Performance
- Operators see it locked in the menu

2 Choose the period and filters — ADMIN

- Period: this week, last week, this month or a custom range
- Violation type, project and Operator

3 Read the results — ADMIN

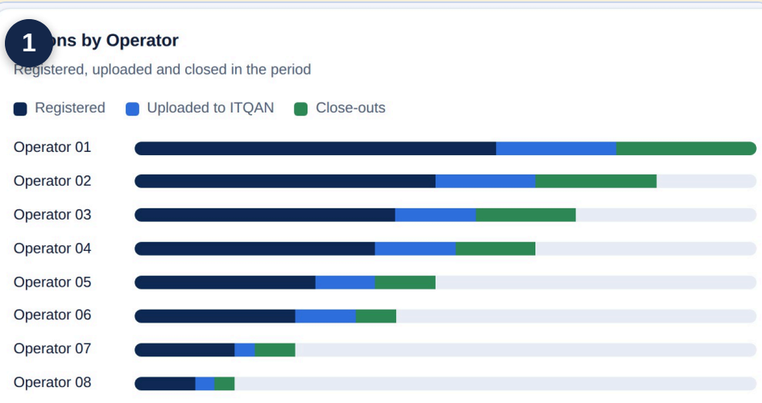

- What each Operator registered, uploaded and closed
- Activity log of every action
- Export to Excel or PDF

Each action counts for the Operator who did it: registering, uploading to ITQAN (Uploaded by) and closing. Admin approvals are not counted.

1

ons by Operator

Registered, uploaded and closed in the period

Actions by Operator. Registered, uploaded and closed.

2

ator details

Registered counts the records an Operator created. Uploaded counts Confirm Driver & Submit steps (the Uploaded by are not counted.

#	OPERATOR	BADGE NO	AI CAMERA	DASHCAM
1	**Operator 01**	[Badge number]	9	5
2	**Operator 02**	[Badge number]	8	4
3	**Operator 03**	[Badge number]	7	4
4	**Operator 04**	[Badge number]	6	3

Operator details. Counts by record type, totals and last activity.

Operators cannot open this workspace.

Rules that apply everywhere

Required fields

A red asterisk marks them. Register stays disabled until all are completed.

Week

Calculated from the date. Weeks start on Sunday.

Departments

A violation belongs to a Project or a Department. The Department filter applies to Dashcam and Speed only.

Deleting

Admin only, after a confirmation. The record disappears from every screen and stays in the audit log.

Dhahran

Appears in SCC HW only.

Light and dark

The user chooses the mode from the dashboard header.

Items still to be confirmed are listed in Section 12 of the requirements.
